

In All of the Universe

We Each Have Our Place

We each have our place.
The smarter, the wealthier, the luckier,
should help out
the less smart, the poor, the unlucky.
The affluent should be proud of their status and help others.
But money is power.
The haves prefer that the have-nots have no resources.
Because it makes the have-nots immobile.
And immobility means no competition.

Only A Stepping Stone

We think we are improving
But we need to plan our escape
We will be bypassed and discarded
We are not as smart as we think we are
We are not the primary reason
We are only a stepping stone
For the march forward
Will continue
Without us

In All of the Universe

In The Blink of an Eye

We can have self governance if we choose

But we allow others to make decisions for us

We turn away and do not pay attention

Self governance takes effort and participation by all

You let others make decisions that you do not examine

You are taken advantage of

Keeping things open and in the light

Takes your determination and persistence

Being indifferent and uninvolved

Leads to your downfall

Others will not act on your behalf, and will take advantage of you

In the blink of an eye

Everything will change

A Common Goal

We all do share a common goal

To go to bed at night

In a secure and safe place

With a full stomach

After a full day of honest work

Shared with loved ones

To be able to get up the next morning, shower, eat, put on clean clothes

And do it all over again and again

In a peaceful, productive, stable manner

This is all anyone wants

In All of the Universe

In All of the Universe

I've looked at all of the images of the farthest reaches of the universe.
I've seen the old images, i've seen all of the exciting new images.
I had to see more.
I was desperate to find out everything that could be seen in the entire vast universe.
I jumped inside my newly constructed spacecraft, and quickly flew around our solar system.
Then I flew around our galaxy, avoiding all of the black holes,
and I definitely stayed away from our supermassive black hole that is keeping us all together.
I traveled to hundreds of solar systems,
then to thousands of solar systems,
then to hundreds of thousands of solar systems,
then to millions of solar systems,
then to hundreds of millions of solar systems.
I was determined.
I traveled all of our of hundreds of billions of solar systems in our one galaxy.
But of course that was not enough,
as this effort so far did not satisfy my curiosity.
So i zipped over to all of the nearby galaxies.
And sure enough I still could not find what I was seeking.
I hadn't found it yet.
So I went all around the entire universe,
to every single galaxy, all of them.
Even all of the dark matter I examined.
I traveled to every single of the hundreds of billions of galaxies,
out to the edges of the vastness (and there are indeed edges)
I examined every spec of stardust.
At the end of the journey, i was exhausted, but it was well worth the exploration.
I knew it all along though, and my journey proved my case.
There is nothing anywhere in the universe more beautiful than my daughter.
