

## **Simplifacatory Parentheticals**

Recalcitrantive minerals harm microscopic membrane

(you cut the skin cells in your hand on rocks)

Saved by thrice inhibiting microscopial anointment

(so you put triple antibiotic ointment on it)

Smoothing crust covered bipedals

(which will heal your broken skin)

Even-toed ungulates jam fat nodes atop spines

(camels conserve energy in their humps)

Dromadary quadrupeds ruminate to leech sustenance

(one humped camels regurgitate their food and chew it again)

Polygamous elements grant triple lidded Saharan wishes

(oxygen must have two hydrogen atoms to create water for camels-  
which have three eye lids)

Two phalanges yield smiles three yield frowns

(sloths facial coloring varies with its number of toes)

Slimy course hair blends into the vaporous atmosphere

(humidity allows algae to grow on sloth fur and act as camouflage)

Spare evolutionary helical vertebrae grant surveillance

(an extra bone in the sloths neck allows it to see 270° of its surroundings)

Homo sapiens created nomenclature and zoos

(Humans make everything complicated)
